**IN MILWAUKEE  
COUNTY**

**931**

**IN WA & WM**

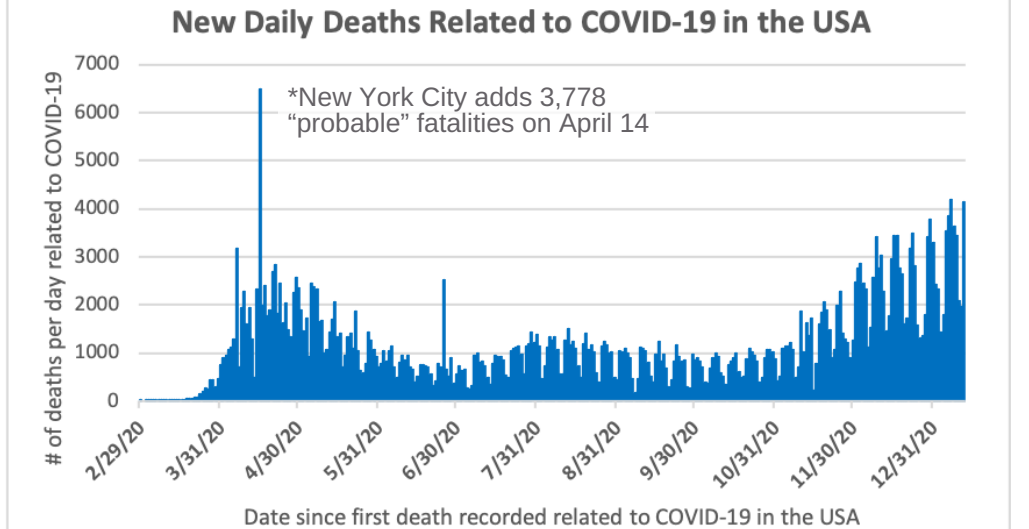

**106**

## COVID-19 RELATED DEATHS SURGE ACROSS THE UNITED STATES

Across the United States, deaths related to COVID-19 are surging. On January 12, 2021 the United States recorded the highest daily COVID-19 related deaths ever, with over 4,000 deaths in one day for the second time in less than a week.

Health officials partially attribute the nationwide increase in COVID-19 deaths and hospitalizations to holiday gatherings this past month.

It will take many months to vaccinate all Wisconsinites. In the meantime we need to continue to take precautionary measures to slow the spread of COVID-19. Vaccinated and unvaccinated people must continue to **wear a face covering, practice social distancing, wash hands often and get tested if you experience any symptoms of COVID-19** to keep ourselves, our families, our communities, and our country healthy and safe.

Data retrieved from the CDC COVID-19 Data Tracker on 1/13/21

## COVID-19 VACCINE FAQ

### WHEN CAN I GET MY COVID-19 VACCINE?

Wisconsin is currently in Phase 1A of the distribution plan. This includes health care workers and residents of long term care facilities.

Other states may be in different stages of their distribution efforts. However, Wisconsin has not authorized vaccination sites to vaccinate individuals who are not part of Phase 1A.

### IS THE COVID-19 VACCINE SAFE AND EFFECTIVE?

Both the Moderna (94.1%) and Pfizer-BioNTech (95%) COVID-19 Vaccine have a high efficacy. This means the vaccine is very effective at protecting you from the virus.

The FDA, CDC, and independent advisors review all vaccine safety and effectiveness data before any vaccine is distributed. *Note: The FDA issued an Emergency Use Authorization (EUA) to permit the emergency use of the vaccines for active immunization to prevent COVID-19 in certain individuals.*

### ARE THERE SIDE EFFECTS FOR THE COVID-19 VACCINE?

Some people have reported side effects such as a sore arm or tiredness after receiving the COVID-19 vaccine. When side effects do occur, they are usually a normal sign your body is building protection to the virus, and go away in a few days.
