

CITY SPOTLIGHT: Tech in the Field

These City employees are using Geographic Information Systems (GIS) Software. GIS compiles data from around the City into one interactive, overarching map that helps DPW crews provide city services. West Allis has used GIS since 1993, and continues to develop new applications that leverage this software - including mobile applications that seamlessly bring GIS data to life on iPads and iPhones for staff in the field, like this DPW vac-all crew. The City of West Allis' award-winning use of GIS software improves operations for city employees, providing more efficient, cost-effective, and better service to our residents.

**The result of GIS mobile applications?
Better, more efficient city services to
residents.**
